SUMMARY

I lead post-training for agent reliability at IBM Research and the team behind Granite Guardian, an open judge model. I set its direction and own its releases, from data to open weights: five versions in eighteen months, each with new capabilities and improvements. The team also adds capabilities to Granite models through modular post-training for reasoning, safety and agentic workloads, such as tool-call checks, groundedness, requirements, factuality and confidence, which Granite Switch composes into one model. Granite Guardian 4.1 ranks fifth of 20 on the Artificial Analysis guardrail benchmark at 59 ms per check. The models run in watsonx.ai, watsonx.governance and Red Hat's Ask Red Hat assistant, with 1.16M downloads on Hugging Face and 371K on Ollama.

I have deep expertise in generative modeling, starting with VAEs and GANs (ICLR 2018, NeurIPS 2017) and now diffusion models, LLMs and agentic systems (COLM 2026, ICLR 2026, ACL 2026), with calibration and uncertainty running through all of it (ICML 2024, NeurIPS 2024). I am a principal investigator on joint projects with MIT and RPI, and a core contributor to AI Fairness 360, AI Explainability 360 and UQ360. The work has 10,043 citations and an h-index of 44 (Google Scholar, October 2026).

EXPERIENCE

IBM Research and MIT-IBM Watson AI Lab

December 2015 – present · Cambridge, MA

Principal Research Scientist and Manager

- Lead the Granite Guardian team. Five releases in 18 months, from 3.0 (October 2024) to 4.1 (April 2026).
- Lead Granite Guardian, IBM's open-source judge and guardrail models, from training data and post-training through evaluation and release. Granite Guardian 4.1 8B (April 2026) covers harm and jailbreaks, RAG groundedness, function-call hallucination and user-written criteria.
- Lead modular post-training for the Granite 4.0 and 4.1 base models, composed into one model by Granite Switch, including its general-purpose Decision adapter, covering policy guardrails, factuality detection and correction, requirement checking, calibrated uncertainty and context attribution.
- Artificial Analysis guardrail benchmark (June 2026): Granite Guardian 4.1 8B scores F1 0.859, fifth of 20 configurations and first among models that take their policy at runtime, at 59 ms average latency.
- GuardBench (April 2025): Granite Guardian models held six of the top ten places across 40 datasets. LLM-AggreFact leaderboard: Granite Guardian 3.3 ranked third of 39 models in 2025, ahead of GPT-4o. Also ranked first on REVEAL (2025).
- Granite Guardian 4.1 as a reward model: 70.29 overall on JETTS best-of-N selection, ahead of every reward model tested, up to 70B parameters.
- Adoption (October 2026): 1.15M all-time Hugging Face downloads across the Guardian models and the two capability libraries, 371K Ollama pulls and 45 community quantized builds. Integrated in Traefik Hub, deepset Haystack and Mozilla.ai any-guardrail.
- Research that shipped: the calibrated-uncertainty capability is trained to reproduce a Thermometer calibrator (ICML 2024), and context attribution to reproduce MExGen attributions (ACL 2025).

- Principal investigator, MIT-IBM Watson AI Lab: “Principles and Methods for Trustworthy Learning With Limited Data” with Prof. Gregory Wornell, and “Human-Centric AI: Novel Algorithms for Shared Decision Making” with Prof. David Sontag. Principal investigator on joint work with RPI on causal inference and agent safety, with Prof. Ali Tajer and Prof. Mohammad Mohammadi Amiri.
- Research on calibration and uncertainty quantification for foundation models (Thermometer, ICML 2024; NeurIPS 2024), abstention (ACL 2026) and guardrails for agentic systems (ICLR 2026).
- Core contributor to the open-source toolkits AI Fairness 360 (2,878 GitHub stars; paper cited 2,937 times), AI Explainability 360 (1,809 stars), Uncertainty Quantification 360 and ICX360.
- Generative modeling: DIP-VAE for disentangled representation learning (ICLR 2018), implemented in Google’s disentanglement_lib and in PyTorch-VAE; semi-supervised learning with GANs (NeurIPS 2017); Fairness GAN; wavelet-domain image synthesis (not-so-BigGAN).
- Earlier work: co-regularized alignment for unsupervised domain adaptation (NeurIPS 2018) and domain shift in clinical models (Best Paper, KDD healthcare workshop, 2019).

Yelp Inc.

December 2014 – December 2015 · San Francisco, CA

Software Engineer

- Built machine learning models for products used by a large consumer base.
- Applied natural language processing and image understanding to improve search results.
- Prototyped systems for measuring deployed data science algorithms.

Arizona State University, School of ECEE

January 2009 – December 2014 · Tempe, AZ

Research Assistant; Teaching Assistant (2011–2013)

- Developed methods for learning hierarchical representations from low-rank and sparse structure, and ensemble sparse models for image classification and retrieval.
- Lead student researcher on an NSF project on ion-channel sensors.
- Teaching assistant for Signals and Systems, about 400 students.

EDUCATION

2014 Ph.D., Electrical Engineering, Arizona State University

2008 B.Tech., Electronics Engineering, National Institute of Technology, India

HONORS AND AWARDS

2025 IBM Research Outstanding Accomplishment: AI Governance Innovations to watsonx.governance and Open Source

2025 IBM Research Technical Achievement Award: Granite Guardian

2024 IBM Research Outstanding Accomplishment: Granite 3.0 Release

2024 IBM Research Technical Achievement Award: Causal Inference for Business Decision Making

2021 IBM Research Technical Achievement Award: Science of Uncertainty Quantification

2021 IBM Research Technical Achievement Award: Science of Accurate, Robust, and Generalizable AI

2020 IBM Research Technical Achievement Award: Science in Learning with Less Labels

2020 IBM Research Technical Achievement Award: Dynamic Neural Networks for Efficient AI

2020 Harvard Belfer Center Tech Spotlight, runner-up, for AI Fairness 360

2019 IBM Outstanding Technical Achievement Award: Contributions to Trustworthy AI

2019 Best Paper, KDD Applied Data Science for Healthcare Workshop

2014 University Graduate Fellowship, Arizona State University

PROFESSIONAL SERVICE

- Associate Editor: Pattern Recognition; Digital Signal Processing
- Area chair and senior program committee: NeurIPS, ICML, ICLR, AAAI
- Organizer: Workshop on Practical Bayesian Methods for Big Data, AI Research Week, MIT (2019); AAAI Fall Symposium on Gathering for Artificial Intelligence and Natural Systems (2018)
- Reviewer: NeurIPS, ICML, ICLR, AAAI, ACL, EMNLP, IEEE TPAMI, IEEE Transactions on Signal Processing
- IEEE Senior Member

MENTORING

- Thesis committee member for Joshua Lee and Maohao Shen, PhD students of Gregory Wornell at MIT, and for Burak Varıcı at RPI.
- Research interns hosted throughout ten years at IBM Research.

ACADEMIC COLLABORATIONS

MIT	Gregory Wornell, David Sontag, William Freeman, Aude Oliva; with Maohao Shen, Joshua Lee, Abhin Shah, J. Jon Ryu, Hussein Mozannar, Hunter Lang, Abinitha Gourabathina
Rensselaer Polytechnic Institute	Ali Tajer, Mohammad Mohammadi Amiri; with Zirui Yan, Burak Varıcı, Sadia Asif
Stanford University	Tatsunori Hashimoto; with Mingjian Jiang, Yangjun Ruan, Zexue He
Mila and McGill University	David Rolnick; with Paula Harder, Qidong Yang, Alex Hernandez-Garcia, Venkatesh Ramesh
